<sup>1</sup> The general fertility rate is the total number of live births per 1,000 women of childbearing ages (15-44).

<sup>2</sup> The total fertility rate is the sum of each age-specific live birth rate multiplied by the number of years in the age group (five years in this case).

<sup>3</sup> The birth rate by age is the number of live births per 1,000 women in a specific age group. For women under 15, the birth rate is calculated using the female population 10-14 years of age, and for women over 44, using the population 45-49 years of age.
